QUAESTOR

During the Roman Empire era, Quaestors were elected officials who supervised the treasury and financial accounts of the state, its armies and its officers. The Quaestors were tasked with financial supervision. To understand:

We provide services for you and never touch your money or accounts. Your financial decisions are yours alone.

INTRODUCTION

Quaestor Solutions announces the release of Quaestor Coin (asset symbol 'QST') as of November 2018. The real-world value of this new token is secured and cryptographically linked to a publicly verifiable Masternode Ecosystem.

Masternodes are the backbones of cryptocurrencies. They maintain each currency's blockchain. Owning a masternode can be cost prohibitive, however masternode owners are rewarded handsomely. Quaestor Solutions has developed a system that makes masternode ownership affordable and convenient. We introduce the Quaestor Coin which is available to the marketplace and masternode owners, and will soon be released on open exchanges as of November 2018. Quaestor Solutions LLC has developed a system that makes masternode ownership affordable and convenient. You do not need to find hosting, understand Linux, pay for utilities, or troubleshoot a myriad of problems that can occur. The Quaestor "Click It" System answers those needs. We are also introducing our Quaestor Trading-Bot Winter 2018/2019. This Bot will give the user complete control of earning potential in trading cryptocurrencies.

Quaestor Solutions can never access your investment capital – You have complete control of your resources at all times. The aforementioned are the initial products and services offered. There is much more to come as outlined in the Coin Roadmap. Now any person who owns a home computer can own and profit from cryptocurrency with Quaestor!

Quaestor Coin (QST)

Whitepaper - Version 1.3

The Problem

As the cryptocurrency market continues to expand, the evolution of blockchain transaction verification and scribing methods are rapidly changing. At the time of this writing, the two main protocols for blockchain transaction verification and consensus, are mining nodes and masternodes. Masternodes are the backbone of cryptocurrencies. They are computer (servers) that form a network. Masternodes are utilized to complete unique functions in ways ordinary nodes (miners) cannot. They can be used for features like direct send, instant transactions, or private transactions. Masternodes maintain the cryptocurrencies blockchain.

Owning a masternode can be cost prohibitive. Buying servers, internet services, and the electricity that powers them can be quite expensive. However, using rented space on an available server gives you the ability to lower your costs substantially. You still need to run programs and understand Linux, a computer operating system, which is foreign to most home computer users. As Bitcoin and alternative cryptocurrencies move into the growth stage of “mass adoption”, there remains very few skilled programmers to help the masses understand how to create masternodes for themselves.

Companies around the globe desire to implement their own products and services, utilizing smart contracts which will be centered within the masternode communities. The cost to set these blockchain ecosystems in place will be very expensive. Obtaining control over one full masternode will become increasingly difficult as coin values rise and more of the population comes to understand the residual income potential. Shared masternode pools are forming to help investors buy portions of a masternode reducing the initial investment.

While the cost to own just a portion is lowered so are the residual payouts as they will be divided according to the percentage of ownership. Adding to the existing difficulties, scam artists are populating the market with worthless coins and devious business tactics designed to defraud the average newcomer out of their investment funds. Once the investor has given over their currencies, these scam artists disappear without a trace. Finding a trustworthy and reputable company to invest in, is becoming more difficult. Finding the right masternode to invest in can also be equally difficult. Not all masternodes are created equally. Without professional help, navigating the masternode selection process can an arduous and daunting task.

Quaestor Coin (QST)

Whitepaper - Version 1.3

The Solution

Enter Quaestor...

Quaestor allows anyone to engage and enjoy our professionally designed and secure masternode ecosystem. With Quaestor you can enjoy the security of a professionally designed masternode community boasting all of the benefits of either full or partial masternode ownership. Selecting the right masternode to invest in is something you need to take seriously, and you should have a structured approach, as such due care and attention is vital. Quaestor eliminates the guesswork of selecting masternodes.

COIN FUNCTIONALITY

Our team of developers has created our own proprietary blockchain using the X11 protocol, which is 8x faster than the current state of Bitcoin (BTC) and the same that DASH uses. QST features the following functionality:

A. 10-Year Masternode Reward Framework

Unlike most masternode coins, Quaestor Coin will feature a 10 year trajectory for payout rewards. The Quaestor blockchain will pay out 5,315 QST daily for 3650 days. This is a total of 19,399,750 QST. The other 600,250 QST were premined and will be utilized to setup the originating 300 QST masternodes. These daily rewards will be shared equally by all active masternodes on the network.

B. Coin Launch Price

Quaestor Coin (QST) will launch at a price of \$3 per coin on the Coin Exchange (www.coinexchange.io) expected in November 2018. The marketplace will then determine the price of QST going forward.

C. QST Supply and Demand

The Quaestor Coin (QST) will only be listed on Coin Exchange for the first few months, then we will expand to Crypto-Bridge, Cryptopia, and the Quaestor Exchange throughout 2019. Therefore, the only way to buy QST on the open market in the immediate future is on Coin Exchange. We anticipate 1000 QST to 1500 QST available for sale at any one time on Coin Exchange. As our Quaestor community grows, we will have a very limited

Quaestor Coin (QST)

Whitepaper - Version 1.3

supply of QST available and potentially a hungry demand for our coin from buyers that want to setup QST full or shared masternodes.

D. The Quaestor Coin (QST) Wallet

We have created our unique proprietary secure wallet for the QST blockchain. Each user will download this wallet onto their computer and they will be able to setup their full or shared QST masternodes within the wallet itself. Our wallet will also be able to feature the new masternode coins we create with our blockchain engine. You can download the QST Wallet on our website at www.quaestor.io once our blockchain launches in November.

CORE PRODUCTS & SERVICES

A. Quaestor Masternode “CLICK IT” Setup Service

Setting up masternodes can require hardcore programming skills, understanding Linux servers, and learning how to troubleshoot quirky masternode technical environments. Quaestor removes this barrier of entry with our masternode “CLICK IT” setup service.

Our customers will only be required to obtain the correct number of masternode coins on the specified exchanges, download the coin wallet onto their computer and transfer the coins into their local wallet. Once this is completed, the customer will login to their Quaestor “CLICK IT” account and follow simple instructions to deploy their masternode.

Effectively, Quaestor makes it easy and accessible for any global crypto user to setup as many masternodes as they desire with a few simple clicks. The “CLICK IT” setup service brings masternodes to the mainstream masses.

Many masternode owners implement an altcoin growth strategy whereby you use your masternode rewards to save up enough coins to start a new masternode. Over many months and years, this can position a masternode owner to control a growing amount of masternodes, and therefore increase their reward potential dramatically.

Every time you require to setup a new masternode, the Quaestor “CLICK IT” setup

Quaestor Coin (QST)

Whitepaper - Version 1.3

service will be available for easy deployment.

B. Quaestor Trading Bot

For the adventure-seeker or the individual who craves a little more daily action, we will soon introduce the Quaestor Trading Bot in winter 2018/2019, which allows the user complete control of their earning potential trading cryptocurrencies. Each bot customer will keep 100% of their trading profits, and there are no minimum or maximum requirements to the amount of bitcoin you can trade. The only limitations could be set by the exchange itself. We charge a monthly fee to access our trading bot.

While we never offer financial advice, we teach you every nuance of the Quaestor Trading Bot product. This allows you to set your goals, establish reasonable risk levels, and initiate and execute trades.

Unlike other bots in the crypto space, Quaestor Solutions never has access to your funds. You have complete control of your resources at all times. You will have the ability to initiate a trade, pause a trade, or exit a trade altogether, anytime you want. Our trading bot even comes with its own re-buy functionality. You will have access to our recommendations for adjusting parameters and signals, allowing you trade like a seasoned, professional trader.

With our proven algorithms the user is able to auto trade cryptocurrencies 24/7 with unrivaled ease while your funds are safely in your own account on the exchange. Our state-of-the-art trading bot software will bring crypto trading to a whole new level. You can trade on multiple exchanges simultaneously from a single bot with many features that have never been seen with trading bot before. We do not guarantee profits; however, we feel our trading bot's performance is competitive in the marketplace.

C. Quaestor Exchange

By the 3rd quarter of 2019, Quaestor will launch its own crypto currency exchange. We are coding the exchange internally with our own developers. The goal is to attract active crypto currency traders to trade the world's best blue chip and masternode coins. We will create Exchange A for blue chip cryptocurrencies and Exchange B for masternode

Quaestor Coin (QST)

Whitepaper - Version 1.3

coins.

Exchange A - World Leading Cryptocurrencies

The goal is to list the top 50 cryptocurrencies in the world such as Bitcoin, Ethereum, Bitcoin Cash, Litecoin, Ripple, and EOS.

Exchange B - Masternode Coins

We will list the highest quality masternode coins in the marketplace, especially the coins that we recommend for our "CLICK IT" service, including DASH, PIVX, QST, POLIS, XAP, TRTT, MANO, and many more to come.

D. Quaestor Masternode Blockchain Engine

With the goal of being the mother of highly credible, vetted, and world-class blockchain projects, Quaestor will carefully select the best-of-the-best clients and create new masternode coins. The selected blockchain projects must solve a major pain point in the world. The masternode coins we create with the Quaestor blockchain engine brand will become synonymous with creativity, great utility and trust, backed by management teams that are professional and dedicated for the long term.

We are aiming to launch only a handful of quality projects per year. The benefits for the new masternode coin and the Quaestor coin are vast. Any new coin we create will have access to our secured wallet, our Quaestor exchange, and our robust community within Quaestor will support the new coin launch. This will dramatically help with our innovative limited supply vs growing demand equation with daily masternode rewards formula. For selected projects, there will be a upfront fee and premined coin agreement required to begin.

E. Quaestor Marketplace - User Adoption Strategy for QST

This is one of the most important sections of our Quaestor Whitepaper. It is extremely important that as we setup our primary QST masternode users throughout 2019, that we establish our QST integration strategy to build usability of our coin.

The biggest questions surrounding a new cryptocurrency, especially for outsiders and newbies to the space is the looking question: What can I do with the coins?

Quaestor Coin (QST)

Whitepaper - Version 1.3

Then once you own QUAESTOR (QST) coins, what do you actually do with them besides setting up full or shared masternodes? Quaestor sees QST as far more than a medium of exchange - but rather an integral part of a growing ecosystem for buying and selling goods and services.

Enter our Quaestor Marketplace.

Imagine sipping on a latte at your neighborhood coffee house, munching on a sub sandwich at your favorite bistro, purchasing a brand-new-state-of-the-art laptop, or paying your bills and sending money peer to peer; the possibilities are endless. One measure of success of a cryptocurrency is the coin holder's ability to spend it on goods or services. The Quaestor marketplace opens this year.

We will launch our first product in the marketplace in December 2018. This retailer will accept Quaestor Coins in exchange for their product. Quaestor will continue the pursuit of acquiring more online and offline retailers that will accept our cryptocurrency. Examples include travel, computers, fashion, event tickets, food products, pay-per-view streaming, health products, CBD oil, and many more. Following our culture of innovating the crypto and masternode space, we will implement our own tactics for expanding the Quaestor marketplace globally. We will unveil this strategy to our community in segments over time.

The Quaestor Virtual Reality Mall

In the future we will launch our own online virtual reality mall that will allow your avatar to walk around and go into shops to purchase everything using Quaestor Coin.

Actively seeking retailers that accept Quaestor Coin (QST)

If you are connected with any retailers, shopping portals, communities or networks that would be interested in accepting the Quaestor Coin, we are excited to speak with you. Please let us know at support@quaestor.io.

FREQUENTLY ASKED QUESTIONS (FAQS)

- 1. When will Quaestor Coin (QST) be listed on an exchange?**
Answer: November 2018
- 2. What is the first exchange will Quaestor Coin be listed on?**
Answer: Coin Exchange (www.coinexchange.io)
- 3. What is the total Quaestor Coin (QST) coin supply?**
Answer: 20,000,000 QST
- 4. How many QST were premined?**
Answer: 3% or 600,000 QST
- 5. How many masternodes will Quaestor blockchain start with?**
Answer: 300 QST masternodes
- 6. How long will the Quaestor blockchain payout masternode rewards?**
Answer: 5315 QST per day for 3650 days
- 7. Where can I download the Quaestor coin (QST) wallet?**
Answer: Once available approximately Nov 10, 2018 on www.quaestor.io
- 8. How many QST do you need to setup a full QST masternode?**
Answer: 2000 QST
- 9. How many QST do you need to participate with 1% of a shared QST masternode?**
Answer: 20 QST, and your QST will be locked in your wallet for 1 year
- 10. How do I setup a QST masternode or Shared QST masternode?**
Answer: Purchase 1 MN Setup or fractional MN Setup from Quaestor
- 11. Where can I buy or sell QST?**
Answer: On our first exchange called Coin Exchange starting mid to end Nov 2018

ACKNOWLEDGEMENTS

YOU + WE + OUR COMMUNITY = ARE THE KEY TO OUR SUCCESS

Creating the Quaestor Solutions ecosystem is the culmination of a team of global professionals. In fact, our Quaestor coin holders currently spans ninety-six (96) countries around the globe. We would like to thank everyone that has added value to our project, especially our growing and thriving community. We could not do this without you, so please know, you are greatly appreciated at Quaestor. We will always do our best to communicate with you as programming, updates, and our marketplace develop.

In particular, we thank our in-house Blockchain developers, technical support, video makers, marketing experts, community managers, writers, client support, and our legal and accounting department; you are all extraordinary, amazing people!

There are many moving parts required in our path to create a world class crypto currency & masternode company. We cannot adequately express our gratitude and thankfulness for each of you.

We look forward to creating this powerful vision with our entire global family.

~ THANK YOU! ~
